

ABSTRACT

5

A golf putter having visual indicia to correct for misalignment caused by eye predominance, the visual indicia being generally D-shaped with the back line linear portion parallel to the clubface and the arc portion facing forward toward the clubface, with a linear alignment line disposed within the arc and back line such that the alignment line is angled a
10 slight amount away from perpendicular to the back line, such that the golfer falsely perceives the alignment line to be perpendicular to the clubface.
